

The app for simple and automated reporting
and licence billing for your packaging using
Microsoft Dynamics 365 Business Central.

As „**dual systems**“ described organizations handle collection, sorting and recycling of used retail packaging for industry and commerce in Germany.

At a glance...

With our **lizentro** app, you can easily and conveniently report and settle your licensed packaging with all dual systems – directly within your Microsoft Dynamics 365 Business Central system.

- automated generation of your interim volume reports and your annual final report
- you fulfil your statutory reporting obligations in accordance with the PPWR and the VerpackDG.
- participation in the system is possible both nationally and internationally
- no additional workload. You do not need to enter the reporting data separately.
- passing on licence fees to downstream retail levels
- management and billing for your own-brand products
- historical data can be edited retrospectively
- reporting of the printed trademarks of the dual systems
- convenient and intuitive operation via the Business-Central user interface you are familiar with
- all functionalities clearly at a glance with the **lizentro** dashboard

Do you have system participation agreements with several dual systems, some of which are based abroad? Do you need to analyse packaging volumes for own-brand or private-label products separately by customer, brand and reporting period in a transparent manner? Do you still calculate your packaging volumes manually using extensive Excel spreadsheets?

Reports to the dual systems and the underlying internal processes are multi-layered and can quickly become complicated.

lizentro turns complex processes into a breeze!

With lizentro, you can fulfil your statutory reporting obligations easily, quickly and cost-effectively!

Since the 12th of August 2026, the EU Packaging Regulation (PPWR) has introduced new Europe-wide requirements and rules for packaging. For businesses, this entails, amongst other things, requirements regarding the reporting and participation in packaging schemes. In Germany, the European legal framework is supplemented by the Packaging Act Implementation Act (VerpackDG), which governs national implementation.

Our **lizentro** app enables you to record and account for your packaging with all authorised dual systems in Germany and internationally.

lizentro supports you in reporting your sales figures, preparing your interim reports and compiling your annual financial statement. You can licence your packaging with one or more dual systems of your choice.

However, integration means even more than that

lizentro is fully integrated into your Business Central system. The familiar user interface allows you to use our app intuitively. You can quickly start using the additional functions and work productively with them. The precision you are used to when managing and calculating data is retained.

Furthermore, data redundancy is avoided, as **lizentro** draws on the data already present in your product master.

Automated generation of your reports to the dual systems

When you create or post a delivery, your sales volumes are automatically calculated and stored. The *DS line items* contain the sales volumes per packaging group. The *DS detailed line items* contain the sales volumes per fraction.

The reporting of these items is then carried out very simply – with a single ‘click’.

The report – *DS licence fees report* – contains the quantities of your delivered packaging, grouped according to the different fractions.

lizentro also allows you to carry out reporting simulations. These provisional reports serve as a control tool to help you check your accounts for the specified reporting period. Whether monthly, quarterly or annually – with our app, you can easily meet the reporting requirements of your licence providers.

Furthermore, you can generate various reports to help you cross-check your reports. They can also serve as a useful tool for analysing your reporting data. Simply filter by different criteria, such as customers, items or costs, and you will receive reports grouped accordingly.

No additional workload – delivered packaging quantities do not need to be recorded manually

lizentro accesses the data already available in your Business Central system. To generate the reports, lizentro uses both company-specific and item-specific master data.

You simply enter additional details such as packaging groups, packaging materials and the required dual systems. For the correct classification of your packaging, packaging groups, fraction types and fractions are required.

All necessary information is entered just once for each dual system during the **lizentro** set-up process. When your items are dispatched, all these pre-set parameters are then automatically saved in the line items and are thus available for retrieval for the reports to the dual systems.

No more paper lists or Excel spreadsheets. There is no need for additional, time-consuming manual recording of your dispatched packaging quantities!

Licence your packaging internationally

Do you operate internationally and distribute products to one or more export countries? Do you wish to register your packaging with the dual systems in the respective destination country?

The requirements for registering packaging may vary from country to country. Our app **lizentro** enables you to flexibly set up and manage your licence fee settlements for neighbouring European countries and worldwide.

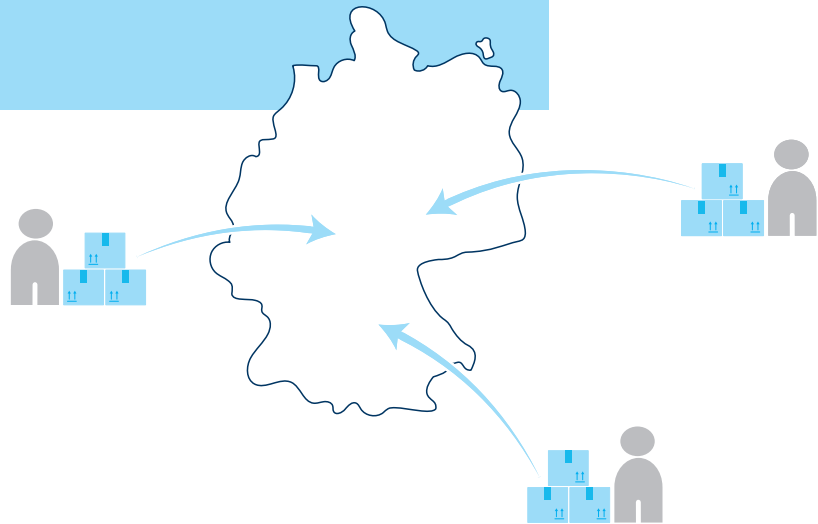

The flexible setup structure of our **lizentro** app enables you to manage your licensing obligations in neighbouring European countries and worldwide.

Please feel free to contact us to discuss your specific sales markets.

Also suitable for foreign exporters

Naturally, foreign companies that export packaging containing goods can also use our app to fulfil their reporting obligations to the dual systems in Germany.

Passing on licence fees to downstream stages of the supply chain

In the case of service packaging such as paper bags, wrapping film or disposable cups, it is often smaller retail outlets such as butchers, bakeries or snack bars are responsible for participating in a dual system. However, these businesses often lack the necessary structures to submit the reports to the system operators themselves.

lizentro automatically generates licence fee items for each product line. These are then clearly shown on the invoice to your customers – allocated accordingly to each individual product line.

You can take care of reporting the service packaging on behalf of your business customers and simply pass on the licence fees incurred – both on a single-tier and multi-tier basis. At the same time, your customers receive the necessary confirmation of the pre-contributed purchase of their service packaging.

Simple and convenient management and billing of own-brand products

Own-brand packaging is also subject to the licensing requirement. The licence fee report clearly lists the volume brackets for each own brand, enabling you to submit a single, straightforward declaration for each own brand.

Retrospective editing of historical data

How quickly can a transposed digit or a typing error creep in? Have you forgotten to assign a brand code, or assigned it to the wrong item? Or is an audit due and you need to prepare an audit-proof annual report?

lizentro offers you various options for retrospectively editing and analysing your historical data.

The following functions are available to you:

- Provided that no settlement has yet taken place, selected *DS items* and *DS detailed items* can be deleted at any time.
- You can retrospectively generate and analyse *DS items* and *DS detailed items* by filtering according to various criteria such as settlement periods or product data.
- For orders, invoices, credit notes or complaints, you can adjust your sales documents with regard to the *DS customer group* and *packaging group*.
- It is also possible to set private labels retrospectively in *DS items* that have already been created.

Everything at a glance with the lizentro dashboard

The **lizentro** dashboard presents all the relevant key figures and functions required for the registration of your packaging with the dual systems in a structured manner. It serves as the administrative control centre for setting up, monitoring and processing your reports to the dual systems.

The clear menu navigation allows you to access various master data quickly and directly. You maintain all the data required for your reports in one central location and can choose between different report types.

In the *DS Settings* section, you'll find all the options for setting up our app. The *DS Archive* section contains all previously created *DS items* and *DS detailed items*.

In the *DS Activities* section, you can see the total number of open items for the current settlement period that still need to be reported to the dual systems. Items that still need to be checked are displayed separately.

Under *Previous Settlement Periods*, all open items that do not fall within the current settlement period are displayed cumulatively.

Reporting the use of trademarks to the dual systems

In Germany, there are several dual systems, each of which has its own trademarks. Additional licence fees may apply for the use of trademarks on packaging. With **lizentro**, you can easily and conveniently manage and account for the use of the dual systems' trademarks.

Benefit from expert know-how

We are happy to assist you with the implementation of **lizentro** to ensure your requirements and individual customer requests are met in the best possible way. In addition, we can provide an introductory session or comprehensive training for your users – tailored entirely to your individual needs.

Our team of experts has many years' project experience. More than 25 years ago, we implemented our first client projects in this field – initially based on NAV and later on Dynamics NAV. Since then, we have continuously refined our product and our expertise.

Technical details

- You can easily and fully integrate **lizentro** into your Business Central solution.
- **lizentro** is available for Microsoft Dynamics 365 Business Central Cloud from version 24 onwards.
- Are you currently using an older version of Microsoft Dynamics but would like to work with **lizentro**? Please get in touch!

You too can automate the reporting and settlement of your packaging to the dual systems.

Please feel free to contact us to find out more about how our **lizentro** app can be used in your business.

About PROTAKT

We have a simple quality criterion: The solution must work!

We have been pursuing this goal in our customer projects for over 25 years. Our team develops and implements business solutions based on Microsoft Dynamics 365 Business Central. Our services range from a comprehensive business process analysis and the optimization of your internal business processes to the development of individual modules. We implement your business solution, train your users and offer you tailor-made support. As a Microsoft partner, we support corporate customers in Germany and Europe. Our goal is to find the best solution for you. As simple as possible, as complex as necessary.
